Team Chainsaw
Retrospective:
- People
  - Steven and Megan were primary coders for this sprint
  - Ryan L offered insight because he was busy
  - Ryan M was a coding fact dictionary, providing helpful information
  - Jake was the leader who organized meetings
- Team Relationships
  - work wasn't split up as well as it could have been
  - time management was terrible
  - we do not hate each other
  - overcame this struggle and are a stronger group because of it
- Process
  - process was flawed
  - we started too late.  As a result, we had to meet every night.  Will be scheduled better next sprint
  - Ownership of individual tasks should be more defined
  - individual meetings will be conducted to gather ideas for improvements
- Tools
  - we all know (mostly) how to use git
  - oracle docs

Backlog:
- Printall
  - print out full list of commands
  - including start time, stop time, power on time, power off time
- code documentation
- code comments
- Tests
  - all functions in program are working
  - test suite with most common use cases
- write method stubs or code skeletons for all of the methods that will need to be implemented throughout the semester
- backlog improvement process
